

the same eight VeReMi archives AUC

as published

ground-truth key | raw pseudonym
random folds | 30% attackers

→ **0.998**

as a receiver would see it

observed identities | disjoint split
3% attackers | jitter

→ **0.843**

One untrained scalar already reaches 1.000 on 6 of the eight.
Signal-strength position verification reaches 0.499, which is chance.
